Important note:

It must be stressed that the outputs produced by the CITES Trade Database can be easily misinterpreted if one is not familiar with them. We therefore strongly recommend you read this guide before starting to use the database.

1. Introduction

The following explanatory notes have been prepared as an aid to understanding the CITES Trade Database and its constituent data. This first section serves as an introduction to the database, providing some background to the reporting process that gives rise to the data, and highlighting some of the limitations of the data. The following section explains how to use the online database in practice, with guidance on the various options available to the user. Finally, the third section explains how to interpret the two types of output produced by the database: comparative tabulations and gross/net trade tabulations.

1.1 The CITES Trade Database

The CITES Trade Database, managed by the UNEP World Conservation Monitoring Centre (UNEP-WCMC) on behalf of the CITES Secretariat, is unique and currently holds over 13 million records of trade in wildlife and over 34,000 scientific names of taxa listed in the CITES Appendices. Around a million records of trade in CITES-listed species of wildlife are currently reported annually and these data are entered into the CITES Trade Database (an Oracle relational database) as soon as they are received by UNEP-WCMC. CITES annual reports are the only available means of monitoring the implementation of the Convention and the level of international trade in specimens of species included in the CITES Appendices.

The CITES Trade Database can be queried and data downloaded from the CITES website (www.cites.org) or the UNEP-WCMC website (http://unep-wcmc.org/citestrade). You can contact UNEP-WCMC directly (see Annex 6 for contact details) if you have a specific data request that you are unable to answer using the online data querying facilities.

Important note:

The CITES Secretariat has created on its website a forum for users of the CITES Trade Database. Any user is welcome to join this forum to exchange comments or queries on this tool. You may register on this page: http://www.cites.org/forum/forum.php

1.2 Annual reporting requirements of CITES Parties

CITES provides a legal framework for regulating international trade in species threatened or potentially threatened by that trade. It is based on a system whereby permits or certificates are issued for international trade in specimens of species listed in one of three Appendices, each of which provides a different degree of trade control. There are currently 178 Parties to CITES, i.e. States that have joined the Convention. Each one must designate a 'Management Authority' that is responsible for issuing permits and compiling annual reports on their international trade in specimens of CITES-listed species. This is a requirement under Article VIII, paragraph 7 (a), of the Convention. Under the provisions of Resolution Conf. 11.17 (Rev. CoP16), annual reports may be sent either to the offices of the Secretariat in Switzerland or directly to UNEP-WCMC (in which case

a note should be sent to the CITES Secretariat informing them that this has happened). UNEP-WCMC has been the Secretariat's consultant for the management of computerized CITES trade statistics since 1980. Annual reports are submitted in various formats: copies of permits, printed reports and electronic. The annual report data are entered into the CITES Trade Database and outputs are generated to allow global statistics to be derived for analysis.

<u>Note</u>: Not all countries are Parties to CITES (see Annexes 4 and 5 for a list of Parties). However, it is possible to determine some levels of trade involving non-Parties from the records of Parties that trade with them.

1.2.1 Annual report compilation

Parties are requested to compile their reports in accordance with the <u>Guidelines for the preparation and submission of CITES annual reports</u> circulated with CITES Notification to the Parties No. 2011/019 of 17 February 2011.

Common departures from these guidelines are as follows:

- Many annual reports do not clearly state whether the data were derived from the actual number
 of specimens traded or from the quantity for which the permits or certificates were issued (often
 considerably different);
- Information on seized or confiscated specimens is often absent or provided in insufficient detail;
- Information on the source of the material, e.g. wild-caught or bred in captivity, and the purpose
 of the trade, e.g. for commercial or non-commercial purposes, is sometimes lacking or used in a
 different way by importing and exporting countries; and
- Non-standard units are often used to describe the volume of articles or commodities in trade, e.g. 'boxes'.

1.2.2 Annual report submission

Under the terms of CITES Resolution Conf. 11.17 (Rev. CoP16), Parties are required to submit annual reports to the CITES Secretariat by 31 October of the year following the one in which the trade occurred. If the data are submitted in the form of permits, it is advisable that Parties submit these to UNEP-WCMC well before that date, as these records have to be entered into the database manually. Not all Parties submit their annual reports on time, some are incomplete, and some Parties do not submit any annual report for several years because of internal problems, such as civil war, lack of personnel or resources, etc. In special circumstances, a Party may request, and the Secretariat may grant, an extension to the 31 October deadline. As a result of these reporting problems, the most recent year for which comprehensive trade statistics are available is normally two years before the current year. A table of annual report submissions since 2006 can be found at: http://www.cites.org/common/resources/annual_reports.pdf.

1.3 Why analyse CITES trade data?

The objectives of many analyses of CITES trade data are as follows:

To monitor trade levels and identify where trade might adversely affect wild populations;

- To assess whether the information supplied by each Party provides an accurate representation of
 its trade in CITES-listed species and whether the data were provided in sufficient detail to fulfil
 the requirements of CITES;
- To ascertain whether the available data provide evidence of trade infractions or inadequate enforcement of CITES and national regulations;
- To discern the most important trade in terms of volume;
- To provide a summary of major trade between countries and thus facilitate, over time, the analysis of trends in trade;
- To identify major anomalies in the reporting of imports and exports.

1.4. Status and accuracy of CITES annual report data

The data entered into the UNEP-WCMC CITES Trade Database undergo a four-stage checking process:

- 1) Visual checks of each annual report are made to attempt to identify any obvious problems, such as use of common names for species instead of scientific names, cities indicated as destinations instead of countries, etc.;
- 2) Several of the data input fields have mandatory values against which the data are compared;
- 3) Records are checked for correct species distribution and valid combinations of taxon and term, taxon and source, etc. (it should be noted that this checking process has only been functioning since November 1995); and
- 4) A further visual check is made of all database outputs.

Where concerns arise over the clarity or accuracy of the data submitted, these are normally communicated directly to the relevant Management Authorities. It is recommended that Parties base their annual reports on permits that have been used. However, some Parties base their reports simply on the permits or certificates they have issued. It is not uncommon for the quantity of specimens traded to be considerably less than the amount specified on the permits, or for permits not to be used at all. Thus trade transactions that may never have taken place and inaccurately reported volumes of trade, will exist in the CITES trade data. Details on the method of reporting used for reports received are available from UNEP-WCMC on request (see Annex 6 for contact details).

CITES Notification to the Parties No. 788 of 10 March 1994 states that: "as information on trade in manufactured products is of limited use, it is recommended that records of trade in manufactured specimens of species in Appendices II and III be summarized". This is reiterated in subsequent and replacement Notifications to the Parties on annual reports. Thus, since January 1994, UNEP-WCMC has not been required to computerize re-exports of manufactured products of Appendix-II and -III species under the terms of its contract with the CITES Secretariat. In addition, since 1992, the only data on artificially propagated Appendix-II and -III plants held in the database have been those that can be directly entered electronically. Since data for these two groups are therefore incomplete, it is recommended that they be excluded from outputs.

1.5 Referencing the CITES trade statistics

The data source for statistics derived from the CITES Trade Database should be referenced as follows:

"CITES trade statistics derived from the CITES Trade Database, UNEP World Conservation Monitoring Centre, Cambridge, UK."

UNEP-WCMC and the CITES Secretariat would appreciate receiving copies of any products or reports produced using data derived from the CITES Trade Database.

We have tried to include enough information in this document to enable a good understanding of the outputs provided and the data therein. If you have any queries concerning the outputs or this guide, please send them to UNEP-WCMC (see Annex 6 for contact details). We are also interested to learn of any anomalies or potential errors you may find in the statistics.

2. Use of the database

2.1 Selection of data variables

The user is able to select a range of data variables, namely:

- the **year range** (from 1975 onwards);
- the exporting and importing countries;
- the **source** of species or specimens traded (e.g. <u>wild</u> sourced or <u>ranched</u> specimens);
- the **purpose** of the transaction (e.g. <u>commercial</u> or for <u>botanic gardens</u>);
- the trade term (e.g. live specimens, skins, etc.); and
- the **taxon** (i.e. <u>genus</u>, <u>species</u> or <u>subspecies</u>) of interest.

For each variable, it is possible to select multiple or 'All' options, although to limit the size of the resulting output, it is not possible to select 'All' for every variable.

2.2 Selection of report type

When the selection of data variables has been completed, the user is prompted to select the output type. The first choice is between an on-screen report or a 'Comma Separated Variable' (.csv) file that can be downloaded and opened with spreadsheet software such as Microsoft Excel. The second choice is between a comparative tabulation report and a gross/net trade report. Section 3 below explains the differences between these outputs and gives guidance on how each one should be interpreted.

3. Interpretation of data outputs

3.1 Comparative tabulation reports

This is the most comprehensive type of output, since it allows reported exports or re-exports from one country to be compared with the imports reported by another. Comparative tabulations also show the reported sources (e.g. wild, captive-bred, artificially propagated, etc.) and purposes (e.g. commercial, scientific, personal, etc.) of the trade; this information is not provided in the gross/net trade reports described in Section 3.2. This type of output is therefore useful to examine the reported purpose and source of the specimens in trade (where this is available), especially with regard to

trade in specimens of Appendix-I species and exports from non-range States. It is also useful for assessing compliance with national and international trade controls, e.g. trade bans and quotas.

The image below shows part of a sample Web report for a comparative tabulation of trade in *Amazona aestiva* from Paraguay between 1995 and 2012 (with term, source and purpose set to 'All').

Comparative tabulations contain the following headings:

Year year in which trade occurred

Appendix CITES Appendix of taxon concerned

Taxon scientific name of animal or plant concerned

Importer country of import (where exports are reported, this is the declared country of

destination)

Exporter country of export (where imports are reported, this is the declared country

from which the specimens were consigned)

Origin country of origin (this column is blank if the country of export is the country

of origin, or if the country of origin is not reported)

Imp Quantity quantity of specimens reported as imports by the importing country

Imp Unit unit associated with the quantity reported by the importing country, e.g.

'KIL' (kilograms). If no unit is shown, the figure represents the total number

of specimens

Imp Term description of specimens traded, as reported by the importing country

Imp Purpose purpose of the transaction (see Annex 2), as reported by the importing

country

Imp Source

(Re-)Exp Quantity

(Re-)Exp Unit

source of the specimen (see Annex 2), as reported by the importing country quantity of specimens reported as (re-)exports by the (re-)exporting country

unit associated with the quantity reported by the (re-)exporting country, e.g. 'KIL' (kilograms). If no unit is shown, the figure represents the total number

of specimens

(Re-Exp) Term description of specimens traded, as reported by the (re-)exporting country

(Re-Exp) Purpose purpose of the transaction (see Annex 2), as reported by the (re-)exporting

country

(Re-Exp) Source source of the specimen (see Annex 2), as reported by the (re-)exporting

country.

A list of the term and unit codes used is provided in Annex 1, purpose and source codes are listed in Annex 2, and a list of two-letter country and territory codes is attached as Annex 3.

The data presented in comparative tabulations are summed, rather than being provided on a shipment-by-shipment basis. This means that all quantities traded are added together for all records where the following details are the same: taxon, term, importer, exporter, country of origin, purpose of transaction, source of specimen and the year in which the trade occurred. If all these details are reported identically by both the exporter/re-exporter and importer, the transactions will appear on the same line of the tabulation. It should be noted that the details of a particular transaction reported by both the exporter/re-exporter and importer frequently fail to show perfect correlation, and therefore will not appear in the same line of the comparative tabulation. This is often for one or more of the following reasons:

- The source of the items and purpose of the transaction are often reported differently, if at all;
- Terms and units may also be reported differently for the same items in trade;
- One of the trading partners may not have submitted a report for the year in question, or may not be a CITES Party;
- Specimens may be exported at the end of one year but not received by the importer until the following year;
- Trade may be reported at species level by one country and at a higher taxonomic level by another. This is particularly common in the reporting of artificially propagated plants.

Below are some examples that illustrate various reasons for lack of correlation (these are fabricated examples of trade in *Crocodylus niloticus*).

					Imports			Exports				
Year	App.	Species	Imp.	Exp.	Term	Quantity	Unit	Term	Quantity	Unit	Purpose	Source
		t example the records are not the same.	s have	not be	en matcl	ned becau	se the 1	ourpose	<u>codes</u> rep	oorted b	y the im	porter

1998	2	Crocodylus niloticus	US	ZW	SKI	<u>200</u>		SKI	<u>250</u>		T	R

Exports

Imports

3.2 Gross/net trade reports

The user is prompted to select one of the following report types: **gross exports, gross imports, net exports** or **net imports**. These output types can be useful to give an overview of trade involving a particular country or taxon. However, it is important to note that these output types tend to overestimate trade levels.

In a **gross trade** output, the quantities reported by the exporter and importer are compared and the larger quantity is presented in the output. This type of output aims to give an estimate of the total number of items recorded in international trade (including exports and re-exports).

A **net trade** output first calculates a country's gross (re-)exports and gross imports, and then gives the positive difference between the two values. This type of output aims to give an estimate of the actual number of items being traded. Note that if your data selection only involves imports to, or exports from, specified countries, you cannot calculate net imports or exports, as not all the data necessary for the calculation will be available. You will only be able to obtain gross imports or exports.

The difference between gross and net trade outputs can be illustrated by the following simplified example: Indonesia reports the export of 50 lizard skins to Singapore and Singapore reports the import of 40 skins from Indonesia. Singapore then reports the re-export of 40 skins to France, and France reports the import of 20 skins from Singapore. In this case, the gross export output would indicate 90 lizard skins in trade, while the net export output would indicate 50 skins in trade.

Important note:

Gross/net trade outputs tend to overestimate trade levels, as where different quantities have been reported by the importer and the exporter, the larger quantity is presented in the output.

The image below shows a sample Web report for gross exports of *Amazona aestiva* from Paraguay between 1995 and 2012:

Gross/net trade reports contain the following headings:

Taxonscientific name of animal or plant involved.				
Term description of specimens traded (see Annex 1).				
Unitunit associated with the quantity reported e.g. 'KIL' (kilograms). If no unit is				
shown, the figure represents the total number of specimens.				
Country the country involved in the trade (if you have selected gross/net imports, this will				
be the country of import; if you have selected gross/net exports, this will be the				
country of export). Please note this program takes no account of the country of				
origin of re-exports when calculating outputs.				
Yearyear in which trade occurred.				

Annex 1. Term and unit codes

The preferred term and unit codes to be used by CITES Parties are described in <u>Guidelines for the preparation and submission of CITES annual reports</u> circulated with CITES Notification to the Parties No. 2011/019 of 17 February 2011. Below is a list of those terms and units (in bold). Additional terms and units that have previously been used in the CITES Trade Database are also included.

DESCRIPTION OF TRADE TERMS

BAL	Baleen		Gall bladders	ROO	
BAR	Bark	GAL		_	Sawn wood
BEL	Belts		Garments	SCA	Scales
BOC	Bone carvings		Genitalia	SCR	Scraps
BOD	Bodies	GRS	Graft rootstocks	SEE	Seeds

FEE	Feet	PAI	Pairs		

Annex 2. Purpose and source codes

The preferred purpose and source codes to be used in annual reports, as specified in <u>Resolution Conf. 12.3 (Rev. CoP16)</u>, are as follows.

The reported **purpose** of the transaction is shown as a one-letter code:

- **B** Breeding in captivity or artificial propagation
- **E** Educational
- **G** Botanical garden
- **H** Hunting trophy
- L Law enforcement / judicial / forensic
- M Medical (including biomedical research)
- N Reintroduction or introduction into the wild
- P Personal
- Q Circus or travelling exhibition
- **S** Scientific
- T Commercial
- **Z** Zoo

The reported **source** of the transaction relates to the original source of the species being traded and again is shown by a one-letter code:

- A Plants that are artificially propagated in accordance with Resolution Conf. 11.11 (Rev. CoP15), as well as parts and derivatives thereof, exported under the provisions of Article VII, paragraph 5, of the Convention (specimens of species included in Appendix I that have been propagated artificially for non-commercial purposes and specimens of species included in Appendices II and III).
- C Animals bred in captivity in accordance with Resolution Conf. 10.16 (Rev.), as well as parts and derivatives thereof, exported under the provisions of Article VII, paragraph 5, of the Convention.
- D Appendix-I animals bred in captivity for commercial purposes in operations included in the Secretariat's Register, in accordance with Resolution Conf. 12.10 (Rev. CoP15), and Appendix-I plants artificially propagated for commercial purposes, as well as parts and derivatives thereof, exported under the provisions of Article VII, paragraph 4, of the Convention.
- F Animals born in captivity (F1 or subsequent generations) that do not fulfil the definition of 'bred in captivity' in Resolution Conf. 10.16 (Rev.), as well as parts and derivatives thereof.
- I Confiscated or seized specimens
- O Pre-Convention specimens
- R Ranched specimens: specimens of animals reared in a controlled environment, taken as eggs or juveniles from the wild, where they would otherwise have had a very low probability of surviving to adulthood.
- U Source unknown.
- W Specimens taken from the wild.
- X Specimens taken in "the marine environment not under the jurisdiction of any State".

<u>Note</u> : the CITES Trade Database does not contain source information for most reports prior to 1991 unless the transactions were specifically reported as captive-bred or artificially propagated.
uniess the transactions were specifically reported as captive-brea of artificially propagated.
